

Introducing

Our Most Advance Scalp and Hair
System

3 Steps – Easy 😊

A Complete System for
both Scalp and Hair

Step 1: Cleanse - Shampoo

Use on wet hair – massage into scalp & hair

Benefits:

- Nourishes scalp for healthy hair
- Provides antioxidant protection
- Helps hair feel stronger and more resilient
- Deeply hydrates and nourishes dry, damaged, over processed hair
- Gentle enough for the scalp and strong enough to strengthen hair down to the roots.
- Protects hair from heat, pollution, and free radicals.

Step 2: Protection – Conditioner & Hydration

Use on wet hair – massage into scalp & hair

Benefits:

- Improves scalp and hair health with an effortless twice daily ritual using ageLOC® Galvanic® Spa
- Nourishes and invigorates scalp and hair
- Calms and soothes the scalp.
- Strengthens and fortifies thin, lifeless hair
- Protects hair from free radicals

Step 3: Treatment – Scalp & Hair

Gently massage Serum into scalp and roots, comb through to the ends

Step 3a: Begin your 2-minute Galvanic Spa treatment

Benefits:

- Improves scalp and hair health with an effortless twice daily ritual using ageLOC[®] Galvanic[®] Spa
- Calms and soothes the scalp
- Strengthens and fortifies thin, lifeless hair
- Nourishes and invigorates scalp and hair

Overall promoting the appearance of fuller, thicker, healthier hair

Genetic Thinning

Hormone Induced

Stress

Who would benefit from this system?

Think out side
the box

- Hair follicles contain some of the **most active cells** in your body, which **need a continuous supply** of oxygen, protein, vitamins and minerals.

1. Menopause

- As **oestrogen levels fall** before, during and after the menopause, the relative effect of **testosterone increases**. Within hair follicles, testosterone is **converted** into a stronger hormone, called dihydrotestosterone (**DHT**) which can **inactivate hair follicles**, leading to hair thinning and hair loss.

2. Stress

3. Pregnancy

- Stress hormones cause the tiny blood vessels **supplying** your **follicles** to **constrict** as **blood** is **diverted away** from your skin to your muscles and brain as part of **the fight-or-flight** stress response.
- This **reduced** flow of **nutrients** can **cause your hair** to look dull, lack-lustre and limp.
- Stress also **synchronises** the natural life cycles of **hair follicles** so they **enter** their **shedding phase** and you **lose more hair** than usual.
- **Pregnancy** is often **associated** with **luxuriant hair growth** due to high levels of **growth factors**, **hormones** and **increased blood circulation**.
- **After giving birth**, it's **normal** to **lose** a **significant amount** of hair as levels of these circulating **growth factors** and **hormones plummet**. This can cause hair life cycles to synchronise, so **lots of hair falls out** at the same time, leading to **noticeable hair loss**.

4: Rapid Weight Loss & Diabetes

- The **crash diets** or **fasting** involved with dramatic weight loss can have a knock-on effect on **hormones**.
- **Take insulin**, for example.
- Scientists have also found a link between **insulin sensitivity** and the body's ability to **regulate** the hormone **testosterone**¹ – a key factor in hereditary hair loss.
- So while the dramatic weight loss might not act as a direct trigger for any kind of hair shedding, the **subsequent hormone fluctuations** may just have an effect.

Extract from:-diabetesjournals.org/28/7/1636.long

5. Polycystic ovary syndrome

- Higher than **normal** levels of **testosterone** can lead to oily skin, acne, excess facial hair and **thinning scalp hair** (female pattern baldness).

The solution

- Whenever a **hormone imbalance** contributes to **thinning hair**, it is common for the specialist to **recommend** products to **stimulate the scalp**.
- **All 3 steps** in the Nutriol System **stimulates** the **scalp** & the ageLOC galvanic will **stimulate blood flow to hair follicles**,
- **Fresh Blood** supply **delivers nutrients** and **proteins** that can help to block the conversion of testosterone hormone to DHT in hair follicles **helping to reduce** the hormone imbalance that **triggers hair loss**.

New Modified ageLOC Galvanic Facial Spa

Delivers ingredients (stimulates)

GALVANIC ACTION
PRE-TREAT

- During the pre-treat cycle, the Galvanic Instrument and the Pre-Treat Gel are negatively charged.
- These negative charges repel each other, delivering the Pre-Treat Gel to the skin.
- The Pre-Treat Gel binds to impurities in the skin.

GALVANIC ACTION
TREATMENT

- During the treatment cycle, the Galvanic Instrument and the Treatment Gel are positively charged.
- These positive charges repel each other helping to deliver the beneficial ingredients to the skin, including the exclusive ageLOC™ ingredient blend.
- The positively charged instrument attracts the remaining negatively charged impurities from the pre-treat cycle, drawing them out of the skin.

Same Current - Same ageLOC technology

Modern sexier interface with the advantage
